August 5, 2011

1 Summary

This file BASICBIB includes basic "front page" data for patents issued from January 1, 1975 to December 31, 2010. It is based mainly on information from a custom extract DVD generated by the Electronic Information Products Division of the USPTO on 4/29/2011. Two of the variables (application number and application date) were extracted from the USPTO's *Cassis* BIB Patents DVD.

The dataset includes patent numbers, issue dates, application dates, application numbers, country of origin of first named inventor, first named assignee, ownership assignment category, and the primary class and subclass of each patent. It also includes four constructed variables: the number of claims, the number of forward citations to the patent (i.e. citations in subsequently issued patents), the number of backward citations to previous U.S. utility patents, and the number of citations to non-patent references.

Beyond conversation and construction of the variables indicated above, I have done little processing or cleaning of the raw data (e.g. assignee names or inventor geographic data). The NBER patent citation project

<http://sites.google.com/site/patentdataport/> is working on all of this, and much more.

For detailed listings of patent citations to and from each the patents in this dataset, use the file USCITES instead.

2 Codebook

```
. codebook
```

patent	Patent Number
--------	---------------

```

                type: string (str7)
    unique values: 3995847                missing "": 0/3995847
    examples: "4658212"
              "5461142"
              "6268625"
              "7071030"

```

st_country	State/Country Code
------------	--------------------

```

                type: string (str3)
    unique values: 233                    missing "": 0/3995847
    examples: "DEX"
              "INX"
              "JPX"
              "NY"

```

assignee	Assignee Code
----------	---------------

```

                type: numeric (float)
                range: [0,983310]        units: 1
    unique values: 244839                missing .: 0/3995847
                mean: 402017
                std. dev: 288111
    percentiles: 10%      25%      50%      75%      90%
                  0      131370   395735   683245   781485

```

asstype	Patent Ownership Category at Time of Grant (Based on First Assignee)
---------	--

```

                type: numeric (byte)
                label: asstype
                range: [1,7]              units: 1
    unique values: 7                      missing .: 0/3995847
    tabulation: Freq.  Numeric  Label
                  5.5e+05    1    Unassigned
                  1.8e+06    2    US Non-Govt Organization
                  1.6e+06    3    Foreign Non-Govt Organization

percentiles:	10%	25%	50%	75%	90%
	0	0	0	1	5

3 Data construction notes

This file includes name and location information on the first named inventor. The separate ALLINVENTOR file includes information for all named inventors. The patent class information in this file includes only first listed class and subclass. For a full list, see the separate ALLCLASS file. Application numbers can be merged to the separate published applications file APPLICATIONS_20012010_BIB which includes patent applications published since 2001.

Forward citation counts are based on all citing patents issued by the end of 2010, in the USCITES file. Note that these forward citation counts are not calculated, and reported as missing values, for non-utility patents. See the documentation for the citations file for details.

Backward patent citations are also constructed from USCITES. Counts of non-patent references are based on information from raw USPTO data. These raw data, and a separate file indicating patent-PMID linkages for non-patent references listed in MEDLINE, will be posted soon.

Eventually, data on the priority dates for each of the patents in this dataset will also be posted.
